

NRP Llama-2-13B FP16: homogeneous vs heterogeneous

End-to-end latency

Minimum deadline for 99% SLO attainment

100/100 requests succeeded at each rate; 32 generated tokens; one sweep per arm. The 99% deadline is the 99th-fastest of 100 requests.
Heterogeneous: 56 GiB and a cross-region pipeline; homogeneous: 48 GiB on one node. These runs are not cost-matched or equivalent to the paper's 70B multi-replica layout.
